

PLEASE CLEAR SNOW AROUND FIRE HYDRANTS

In an emergency, every second counts. Fire hydrants that are blocked, concealed, or difficult to access due to snow or ice can and will impede emergency fire response.

Fire trucks carry a limited amount of water, so one of the first tasks upon arriving at a fire is to locate a water supply from the nearest hydrant. Hydrants covered in snow can be difficult to locate, and uncovering them can waste valuable time needed during a fire fight. Keeping them clear can mean easier access to water and more time doing what really matters – fighting the fire.

In addition to removing snow and debris covering the hydrant itself, the West Dundee Fire Department recommends clearing a 3 foot area around the hydrant. This will help us with accessing the hydrant to connect hoses and operate the hydrant, it will also give our hoses enough area to charge and prevent kinking which could greatly reduce water supply.

The West Dundee Fire Department also suggests maintaining a shoveled path from the street, sidewalk or driveway to the fire hydrant so that it is visible from the road and firefighters can easily access it.

Although there are few hard and fast rules concerning who should clear hydrants, it's generally considered the responsibility of the residents occupying property nearest a hydrant. Consider helping elderly friends, neighbors, or those with medical conditions to keep their fire hydrants clear.

The winter can be a time for enjoying both the great outdoors and indoors with friends and family. Help keep your home safe from winter fire hazards by ensuring your fire hydrants are clear and readily accessible in an emergency.

The West Dundee Fire Department and our mutual aid partners thank you for taking the time for this important snow removal step.

Sincerely,
Fire Chief Lance Harris
